

Want to PROTECT digestive system to SUSTAIN livestock productivity?

MULTIX & ALPHA RM

Several factors affect the digestive balance of animal and therefore generate disorders.

Environment

Temperature, humidity,
Infectious pressure,
Water quality,
Breeding conditions.

Health

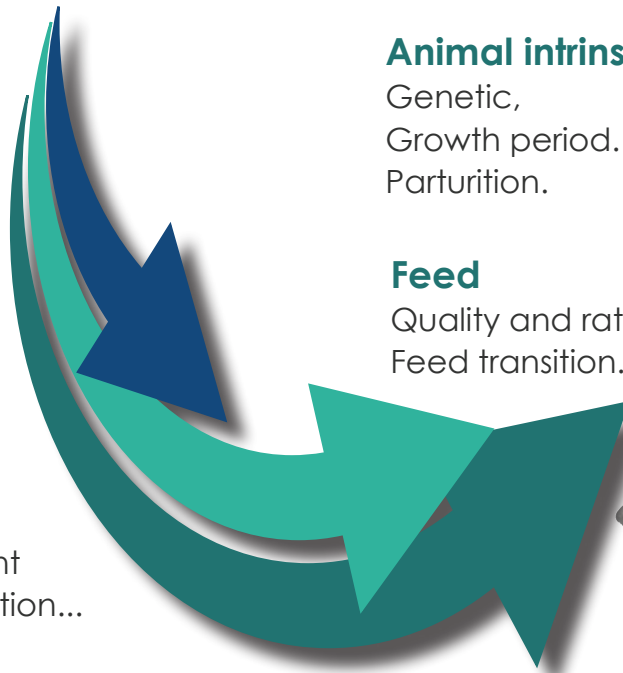

Low immune response,
Post antibiotic treatment
Stress periods : vaccination...

Animal intrinsic factors

Genetic,
Growth period.
Parturition.

Feed

Quality and ration composition,
Feed transition.

IMPACTS ?

Quick increase in energy demand with transit disorders
affect the digestive system's balance
= Decrease of nutrients and water availability !

ALPHA RM, intestinal transit retarder and rehydratant.
MULTIX, support in case of vitamins and trace elements deficiency.

■ ALPHA RM *Intestinal transit retarder and rehydratant*

Complementary feed supplement.

Alpha RM is adapted to - feed transition period such as post weaning period,
- stress period such as parturition, vaccination,
Animals having diarrhea frequently develop dehydration, and electrolytes abnormalities, and are in a state of negative energy balance.
Bovine and ovine may have strong ion acidosis.

ADVANTAGES

- Sodium bicarbonate **reduces muscle cramps** and has a **buffering effect** to prevent acidosis in bovine and ovine.
- Sodium and magnesium favor **quick electrolytes stock recovery** while respecting osmotic balance and limit **demineralisation consequences**.
- A high concentration of dextrose sustains a **better absorption of electrolytes**,
- Isphaghula **produces mucilage** and has a strong effect **against diarrhoea**.

PRESENTATION

Powder : ready for use sachets (calves, foals) or bulk in bucket (lambs, piglets).
Sachets of 100g, jars of 1kg or bucket of 2,5 and 5kg.

■ MULTIX *Support in case of deficiency of vitamins and trace elements*

Complementary feed supplement of fat and **water soluble vitamins, amino acids and minerals**.

Multix is adapted - during growth critical periods, physiological disorders (stress, disease),
- to prevent or treat feed imbalance,
- during dairy cow's gestation period
- in case of poultry pecking behaviour.

ADVANTAGES

- Complete solution : brings a **good coverage of** animals' needs through the combination of amino acids, vitamins and trace elements,
- Sustains the **proteins and fatty acids metabolism**,
- Convenient to use and a presentation of its components easy to assimilate.

PRESENTATION Liquid in containers of 1 liter and 5 liters.
Administer through drinking water or feed.
